### DID YOU KNOW?

According to the American Public Transportation Association (APTA), public transportation produces nearly 50 percent less carbon dioxide (CO2) and nitrogen oxide (NOx) per passenger mile, as private vehicles, and public transportation use saves 1.4 billion gallons of gasoline per year -the equivalent of 108 million cars filling up in a year .

In addition, transportation is the second highest cost for American families. And as gas prices continue to rise, families will be looking for alternative ways to travel.
